Short report

The third edition of the ISGS Summer School was held in Paris from July 22nd to 26th 2012.

The School brought together over 50 young researchers and experienced scientists at the Cite International Universitaire de Paris for 4 days to attend courses on sol-gel chemistry and advanced characterization techniques. 14 countries were represented as follow: 27 attendees from France, 4 from Austria, 3 from Belgium, 2 from Germany, 2 from Lithuania, 1 from Portugal, 2 from Switzerland, 2 from Ukraine, 2 from United States of America, 1 from Italy, 1 from Italy, 1 from Poland, 1 from Slovakia, 1 from Spain.

There were 10 invited talks given by internationally recognized scientists in their field, coming from both Academia and Industry. The courses covered theoretical and practical materials, topics ranging from sol-gel chemistry to advanced characterization techniques during an intensive program.

The first plenary lecture was given by Thierry Gacoin who presented the intense field of investigations of nanoparticles research. *Michel Aegeerter* gave us an overview on wet chemical coating technologies. *Philip Llewellyn* described the use of adsorption and other complementary methods for the characterization of powders and porous solids. Mika Linden described the different options for characterizing the surface chemistry of native and functionalized materials. *Cédric Boissière* focused on thin film analysis and the description of Spectroscopic Ellipsometry as an advanced, non destructive, characterization technique. François Fabreguette reviewed the fundamentals of X-Ray Diffraction and X-Ray Reflectivity techniques to characterize advanced thin films. *Nicola Pinna* covered electronic microscopy while *Claire-Marie Pradier* described photoelectron spectroscopy. *Géraud Dubois* demonstrated importance of mechanical properties of thin films. Finally, *Christian Bonhomme* presented Advanced NMR techniques for nanomaterials.

At the poster session 15 participants presented their research during a session rich in exchanges and discussions.

The weather was nice, the school venue was great and the social program was rich (wine & cheese, banquet, boat trip, picnics and nightlife in Paris). All together the summer school occurred in a friendly atmosphere with lots of extended scientific discussions. It was also a great opportunity to discover or rediscover Paris .

First feedback from the meeting is very positive – participants greatly enjoyed the chance to meet new people and to network. They learned a lot from the speakers as well as from one another.

The organizers would like to thank very much the speakers for the quality of their tutorials and the time they devote to the school.

The next ISGS Summer School is planned to be held at the same place, at CIUP in Paris, in July 2014.

22-26 July 2012
Paris - France

POSTER PRESENTATIONS

Fabrication and characterization of light trapping structure for thin-film solar cells.

Barbara Brudieu (CNRS/Saint-Gobain Recherche SGR; SVI / Ecole Polytechnique; PMC), A. Le Bris (CNRS; SVI), F. Guillemot (SGR; PCRS), J. Teisseire (SGR; SVI), E. Sondergard, E. Barthel (CNRS; SVI), T. Gacoin (Ecole Polytechnique; PMC), F. Sorin (SGR; SVI) - barbara.brudieu@saint-gobain.com

Infiltration of Luminescence Particles in Mesoporous Hosts.

Andrea Feinle, A. Sternig, I. Merschmann, S. Baumann, O. Diwald, N. Husing - Andrea.Feinle@sbg.ac.at

Use of sol-gel method for the production of metal corrosion protection coatings based on Organic-Inorganic Hybrid gels.

Rita B. Figueira, C. J. R. Silva, E. V. Pereira, M. M. Salta - rmfigueira@Inec.pt

Highly Porous Silica and Titania Monoliths Derived from Glycol-modified Precursors.

Sylvia Fleig, J. Akbarzadeh, H. Peterlik and N. Husing - sylvia.flaig@sbg.ac.at

Noble metal deposit on Bi₂WO₆. Application in photocatalysis.

Marie-Anne Lavergne, Tamar Saison, Olivier Durupthy, David Portehault, Sophie Cassaignon, Nicolas Chemin, Corinne Chaneac - marieanne.lavergne@ens-lyon.fr

Photocatalytic decomposition of methylene blue under LED irradiation on indium doped titanium dioxide: the impact of thin films thickness.

Irina Levchuk, Sami Suihkonen, Markku Sopanen and Mika Sillanpaa - irina.levchuk@lut.fi

Synthesis, structure and properties of polysiloxane sorbents functionalised by complexing groups.

Melnik Inna V., Zub Yuriy L. - inna_melnik@mail.ru

Solid Li⁺ - carrying membranes.

Mathieu Meyer, Andre Vioux, Ahmad Mehdi, Lydie Viau, Sophie Monge-Darcos - meyer.mathieu@voila.fr

Characterisation of gold nano-particles supported on SBA-15.

Klaudia Odrozek, K. Maresz, J. Mrowiec-Białoń - Klaudia.Odrozek@polsl.pl

Nanoporous thin films for biosensing applications.

Oswaldo J. Perez Anguiano_{1,2}, E. Scolan₁, B. Wenger₁, R. Pugin₁, H. Hofmann₂ - oswaldo.perezanguiano@epfl.ch

₁Centre Suisse d'Electronique et de Microtechnique, CSEM SA, Neuchatel, Switzerland

₂Laboratoire de Technologie des Poudres (LTP), Ecole Polytechnique Federale de Lausanne, EPFL Switzerland

Comparative study of the structure of new layered organic-inorganic phases based on boronate ligands.

Saad Sene, M. Reinholdt, S. Begu, H. Mutin, P. Gaveau, A. van der Lee, G. Renaudin, C. Bonhomme, D. Laurencin - saad.sene@univ-montp2.fr

SiO₂ (HIPE) monoliths from an ethylene glycol-modified silane.

Christos Triantafyllidis and Nicola Husing - christos.triantafyllidis@sbg.ac.at

Aqueous synthesis of high surface area TiO₂ from titanium alkoxides/glycolates and the influence of the pH and the precursor chemistry on the received particles.

Konstanze Werner, Gerold Tippelt and Nicola Husing - konstanze.werner@sbg.ac.at

Semi-batch Coating of Submicrometer-sized Silica Particles With Titania.

Ida E. Widnersson and Rachel A. Caruso - i.widnersson@student.unimelb.edu.au

New sol-gel nanocomposite resists based on inorganic oxides.

Erika Zanchetta₁, G. Della Giustina₁, G. Grenci₂, A. Pozzato₂, M. Tormen₂, V. Auzelyte₃, J. Brugger₃, G. Brusatin₁ - erika.zanchetta@gmail.com
